Thanks For Purchasing!!

Simple 2D Elevator System

A **fully working 2D Elevator system** for Unity that can use for any game project.

Features

- Elevator
- Floors
- Animations

Prefabs: (Heading are Folders, Points are Prefabs)

Elevator

- Elevator Main Canvas – Hold the Floor Container.
- Elevator Door – Hold Door Image and Animator Component.
- Elevator Moving Part – it is the object travel between the floors. it hold the Moving Part script and a button to open a Control Panel.

Elevator Panel – it is the Control Panel which is used to open/close the doors and it has floor request button.

Floor

- Floor – it is the main container which hold the Elevator Container and Elevator Door Container. (Elevator Object will Create only in Ground Floor(Index = 0). Because 1 elevator for all the floors.

Floor Button – This is used to instantiate inside the Elevator Control Panel.

Main Controller

- Main Controller – it will Create Floors, elevator and Add Listeners.

Scripts:

Elevator

- ElevatorManager .CS – Instantiate Elevator Moving Part and Doors and Handle Allocating Elevators
    - `public void RequestElevator –` used to Get the nearest elevator to assign from A to B. (it has another overload Function – it is used to Assign Specific Elevator).
    - `public ElevatorMovingPart GetNearestElevator–` used to get the nearest Elevator calculated by distance between the floor and the elevator.

- ElevatorMovingPart .CS - Handle Movements and Animation Control.
    - `public void MoveToFloor –` used to move the elevator from A to B.
    - `PlayOnStopAnimation and public void PlayDoorAnimation – used to Control the Door Animation`
- ElevatorControlPanel.CS - Handle Button Event..

Future Improvements

- **Automatic Elevator Calls** – we can switch between mode Manual and Automatic. So all the Lifts can work without interaction it's very useful for Idle Games.
- **Player Move Support** – Moving player with Elevator useful for platformer Game.
- **3D Support** – Elevator Script for 3D Models.
- **Dotween Elevator Door Animation** – For Better Control over Code and fewer complexes.
